

How to use DownloaderP v1.0

step1:

copy the DownloaderPv10.c to the required folder.

Step2:

Type the following commands .

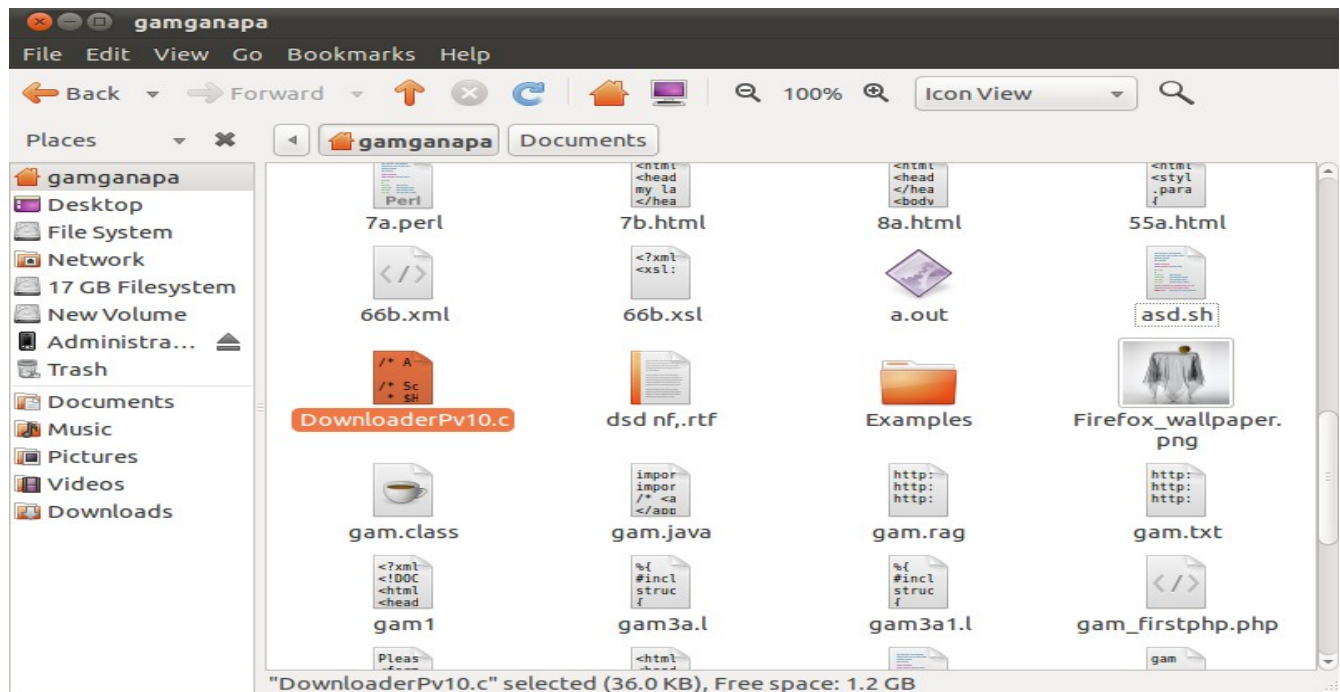

cc DownloaderPv10.c

./a.out

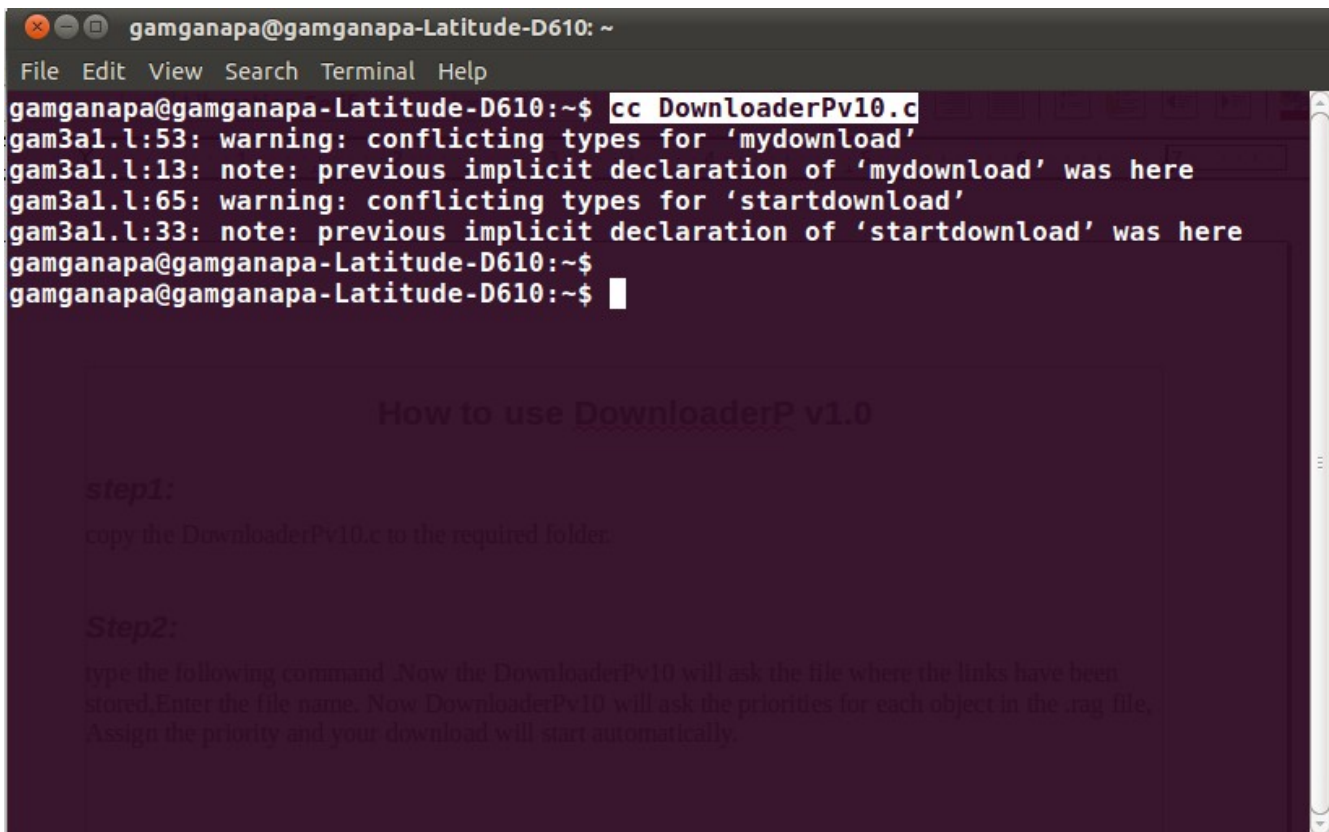

Now the DownloaderPv10 will ask the user to specify the file where the links have been stored, Enter the file name. Now DownloaderPv10 will ask the user to enter the priorities for each object in the .rag file, Assign the priority and your download will start automatically.

Example:

→ The below window shows the DownloaderPv10 in the home folder.

→ Now open the terminal and compile the DownloaderPv10.c file

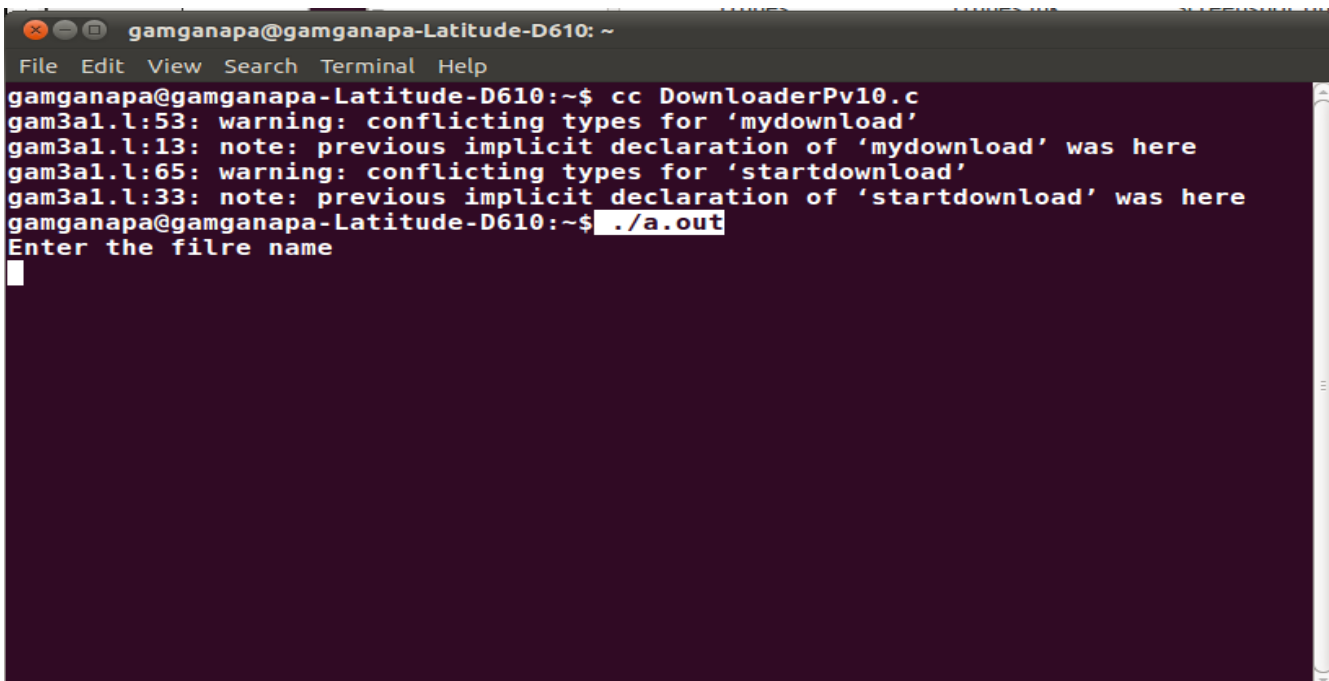

```
gamganapa@gamganapa-Latitude-D610: ~
File Edit View Search Terminal Help
gamganapa@gamganapa-Latitude-D610:~$ cc DownloaderPv10.c
gam3a1.l:53: warning: conflicting types for 'mydownload'
gam3a1.l:13: note: previous implicit declaration of 'mydownload' was here
gam3a1.l:65: warning: conflicting types for 'startdownload'
gam3a1.l:33: note: previous implicit declaration of 'startdownload' was here
gamganapa@gamganapa-Latitude-D610:~$
gamganapa@gamganapa-Latitude-D610:~$
```

How to use DownloaderP v1.0

step1:
copy the DownloaderPv10.c to the required folder.

Step2:
type the following command .Now the DownloaderPv10 will ask the file where the links have been stored,Enter the file name. Now DownloaderPv10 will ask the priorities for each object in the .rag file, Assign the priority and your download will start automatically.

→ After compiling the code type ./a.out in terminal to run the code the software will ask the file name where the links to be downloaded is present.
