DownloaderP

- **Product Name and Version**

  DownloaderP v1.0

- **Author Name**

  Raghavendra.M.R

- **Description**

  Using DownloaderP v1.0 you can download the content from the Internet. To do this all u need to do is to save the links in a .rag file (.rag is a custom file extension). Thats not all before downloading, the software will ask the priority for each object in the .rag file, where links are stored. Based on that priority the file will be downloaded. Since this is CUI based software it can also be used in CUI supported Linux systems.

- **Features**

  → The product is implemented by using lexical analyses tool.

  → This software is one among the CUI based downloads and it gives the flexibility to download the content based on priority.

  → Small companies where version control system is not setup, this software can be used effectively for sharing data b/w the stack holders. (all the files that are required to be downloaded can be placed in one file and the file can be exchanged among them)

- **System requirements**

  operating system : Linux (extensively tested on Ubuntu).
  c compiler (extensively tested on cc compiler).
